CAREER OBJECTIVE

Computer Science Engineer and published IoT and ML researcher turned AI Adoption Engineer. Passionate about technology and driven to make meaningful contributions to the field. With hands-on experience spanning IoT research, full-stack development, AI systems, and real-world product delivery, I bring a versatile skill set, a strong work ethic, and an eagerness to engage with challenging problems, continuously learning, adapting, and growing alongside the industry.

EDUCATION

B. Tech Computer Science and Engineering | Vellore Institute of Technology, Vellore | 2021-25 | CGPA: 8.00
CBSE (Class XII) | Maheshwari Public School, Kota | 2020 | 69.6%
SSC (Class X) | Oasis English School, Parbhani | 2018 | 96%

WORK EXPERIENCE

DAO EV Tech, Pune (Jan 2026–Present)
Lead AI Engineer & Team Manager (Sept 2026–Present; previously Jr. IT Developer and Intern)

- Lead and manage a team of 4 interns and 1 full-time engineer, directing AI agent development and delivery for DAO EV Tech's agent-native platform (DaoOS).
- Mentor and onboard incoming interns on the agent-native architecture and codebase, pairing on agent development and code review to maintain consistent quality and governance standards across the team.
- **Contribute as an engineer on DaoOS,** DAO EV Tech's AI-agent-native operating platform: 20+ production and pre-launch autonomous agents spanning sales, retail ordering, marketing, HR, finance, and field operations, built on a governed architecture (human-gated approvals, confidence-scored writes, zero-direct-external-calls).
- **Shipped fixes and features on the platform's highest-traffic retail order agent** (1,100+ customer messages/2 weeks): order-flow logic, WhatsApp catalog sync, branded document delivery, and a 47-case regression suite.
- **Engineered the voice/STT pipeline for a multilingual sales agent:** vocabulary hints, Hindi/Marathi safety filtering, TTS normalization, session-continuity fixes.
- **Contributed to a marketing automation agent** and campaign infrastructure: consent/referral logic, WhatsApp multilingual template pipeline, delivery-receipt tracking.
- Diagnosed and fixed a platform-wide messaging defect silently blocking opt-out/hand-off replies across every agent; shipped a database-enforced fix.

Freelancing Experience (Cohere.ai, UM IT Solutions, Individual Clients) (October 2024 – December 2025)

- Collaborated with clients using Agile methodologies, delivering iterative features and managing full release cycles.
- Developed and delivered custom software solutions across web, mobile, AI/ML, and data analytics domains. Translated complex client requirements into scalable architectures, handling everything from system design to final deployment.
- Delivered AI/ML solutions (image classification, predictive analytics, NLP, automation) using TensorFlow, Keras, scikit-learn, and OpenCV. Built and fine-tuned models from data preprocessing through evaluation, deploying production-ready pipelines tailored to each client's business needs.
- Provided data analysis & visualization with Python (Pandas, NumPy, Matplotlib), Power BI, and Excel. Transformed raw, unstructured datasets into actionable dashboards and reports that directly informed client decision-making.
- Managed end-to-end client projects, ensuring high-quality, scalable, and deadline-driven deliveries.

FOUNDING / ADVISORY VENTURES

Indo-Africa InfoTech: AI Lead *(Personal Venture)*, Sept 2025–Present
Company Website

- Serve as AI Lead for Indo-Africa InfoTech, a cross-continental (India–Africa) engineering and technology company, as part of its core founding team.
- Guide the organization's AI workflow and automation strategy, advising on agentic AI and autonomous system design.
- Contribute to overall technical direction and engineering leadership as a core team member alongside the company's founders.

PROJECT

Asset Tracking and Tracing using ESP32 (Patented & Published):

- Built a zone-based BLE asset tracking system using ESP32 (GATT server) and ESP32-C3 tags (clients) to provide real-time asset location visibility on shop floors, reducing wasted search time by ~20%.
- Designed a historical data collection pipeline (MongoDB + Node.js) to log asset movement patterns, architected as a foundation for ML-based predictive maintenance, enabling early identification of equipment failure risks before unplanned downtime occurs.
- Addressed the core research gap of RSSI unreliability in BLE positioning by implementing proximity-based zone detection, referencing and improving upon ML-RSSI techniques from IEEE literature (CSCI 2022).
- Developed a Web BLE client app (HTML/CSS/JS) with real-time zone visualization, geofencing alerts, and role-based authentication via MongoDB.
- Tech Stack: ESP32, BLE GATT, Node.js, Express.js, MongoDB, Mongoose, JavaScript.

Waste Classification App:

- Android app using machine learning to classify images of waste into six categories (cardboard, glass, metal, paper, plastic, trash). Built with Flutter. Technologies: Flutter 2.0+, TensorFlow, InceptionV2 Model.

Volume Vallet (Volume Remote Control App):

- Developed an Android app using Flutter to control PC volume over a local network. Implemented swipe/tap gestures, one-tap mute/unmute, and media playback controls. Technologies: Flutter, Flask, Python.

SKILLS

- **Languages:** C++, C, Python, Java, JavaScript, TypeScript, SQL, HTML/CSS.
- **AI & Agent Engineering:** Claude Agent SDK, LLM Orchestration, Autonomous Agent Architecture, Multilingual Voice AI (STT/TTS), Google Gemini, Prompt Engineering.
- **Frameworks & Libraries:** React, Node.js, Express.js, React Native (Expo), Socket.IO, Tailwind CSS.
- **Databases & Cloud:** Supabase (PostgreSQL, Edge Functions/Deno), Redis, pg_cron, Vercel, AWS, Azure, Google Cloud (GCP).
- **Integration & Messaging:** WhatsApp Cloud API, REST APIs, Webhooks, Notion API.
- **Tools & DevOps:** Git, GitHub, Claude Code, JWT Auth, Sentry, Jest, CI/CD.
- **Leadership:** Team Management, Cross-functional Collaboration, Technical Mentorship.

EXTRA-CURRICULAR ACTIVITIES AND ACHIEVEMENTS

- Won 2 times VIT Premiere League (Football).
- Competed in Tech Hunt, advancing through the coding round to design and build an Arduino-based line-following robot.
- 8 times National winner in Math's competition (Abacus).

POSITIONS OF RESPONSIBILITY

- **Team Lead, AI Engineering (DAO EV Tech):** Managing a team of 4 interns and 1 full-time engineer on AI agent development and delivery.
- **Core Technology Team (Indo-Africa InfoTech):** Contributing to AI workflow strategy and technical direction as part of the founding leadership team.
- Core Committee Member, CSED (Centre for Social Entrepreneurship and Development), VIT.
- Member, NGO team FEPSI.
- Core Committee Member, Fitness Club, VIT.
